## **Granite Street, Starpine Place, & Allen Lane Roadway Improvements**

March 2025

### **ROADWAY PROJECT**

The project generally consists of roadway, slope, and drainage improvements along Granite Street, Starpine Place, and Allen Lane south of White Spar Road. The primary scope of work is to remove and replace the roadway asphalt surfaces which have deteriorated and are too difficult to maintain.

Work includes the removal and replacement of roadway surfaces, aggregate base, and possibly dirt sub-base. Other improvements may include slope stabilization, protection, and armoring, replacement of damaged curb, gutter, valley gutters, and spandrels, guardrail improvements or replacement, replacement of damaged sidewalk, ADA accessibility improvements at sidewalk ramps, storm water drainage collection and conveyance system improvements, and utility adjustments.

The City is performing the engineering design services in-house and anticipates finalizing design drawings in Spring 2025. The City plans to advertise for bids, award a construction contract, and start construction in Summer 2025. Completion of construction is anticipated by December 2025.
